

In-field data collection, simplified.

Lightship Collect enables field data collection – a simple application for data capture, visualization, and reporting that streamlines projects and saves time.

Online or off-line

Work in connected and disconnected environments, knowing that your data will synchronize as soon as there is a data connection.

Seamless integration

The data you collect in the field is integrated perfectly into your maps, allowing visualization and comprehensive reporting on the work completed.

Custom forms

Quickly design and share forms to support any of your business needs. Each form can include multiple photos or attachments, and have specific login requirements.

Reporting

All data can be queried and summarized, allowing you to analyze trends and identify problems and inefficiencies. Results can be visualized on a map or as a data export.
